

Lesson 10

Composition

What is composition?

- Composition is when our class contains in it another instance of a different class.
- For example, we have 2 classes: Teacher and Classroom.
- Teacher will have 2 instance attributes: Name (string), and num_years_experience (int)
- Classroom will have 2 instance attributes: num_students (int), and Teacher. Teacher will actually be an instance of the Teacher class. Let's see how this will work.

Fun Assignment - And Big ;)
